

Education and Gilgit Baltistan

Name .Mehdi Hassan

Class.BBA

Abstract:

My article is about the education and the problem of Gilgit Baltistan student. Education is the key of success of any nation in word .Northern are of Pakistan faced a line of problem in field of education health and other department of the life. But the most important that I want to highlight is education. Education is strength of any nation without education it is not possible for any nation to give their complete existence on the world. Student is backbone of any nation However if the backbone is weak then the nation is also weak because their is directly relation ship between education and strength of nation.

Key words:

Success, strength, backbone, existence, education

Education means more than just learning one's ABCs. It is necessary for social and economic development. In the developing world many children have to stop their schooling due to financial concerns of their family. Children regularly help out at home or have jobs themselves to help their families earn money. This means that these potential students are not in class. Rural areas throughout the world have fewer schools.

Education lover nation cut their extra expenses and use in education but unluckily over government is corrupt and not give enough money for the education sector for that reason the illiteracy rate is grow up day by day .In cities some extent their is education facilities are available but in village there is low degree of educational facilities .

This means that it is harder to find an available school that has proper learning resources. Currently rural areas are generally not as educated as

urban areas, which creates an educational divide between rural and urban areas. This divide furthers the gap between urban and rural wealth.

Without a proper education, children and families will have trouble getting out of this circle of poverty. Some students cannot afford the school fees for uniforms, books, supplies, and other indirect costs that are hindrances to attending school. This is true for both rural and urban areas. Governments should waive these fees so more people can afford to go to school. Universal primary education has to be accessible. This means schools must receive an equal distribution of funding regardless of geographic or socioeconomic locations.

Education is fundamental for development and countries around the world need to embrace this in order to develop. Developed nations can help developing ones by cutting payments. Oxfam points out that Zambia had to cut their education budget in order to qualify for another round of funding from the IMF. The better educated a country is, the easier it is to develop economically.

Even when nations have supported education, it is harder for certain segments of the population to get access to schools. In the developing world more boys attend schools than girls, with Western and Southern Asia having the biggest discrepancy. Without equal education for all, gender equality will be harder to attain.

Education is a first step for any nation towards success. I want to appeal to the Gilgit Baltistan Government to start scholarship system for the young talent in the field of education and support new generation for better future. These students are not disabled but they have so much lack of educational opportunity. Every govt. of Pakistan not give there attention on this area but it is highly required. Thousand of student from these area come in other city of Pakistan for there better education but unluckily they have no facilities in other cities. The educational policies of Pakistan govt. is also dishearten

Conclusion:

There is large no of problem in field of education faced by gilgit baltistan student .I requested the govt of Pakistan as well as the govt. of gilgit baltistan please don't fight on the political issue but give attention on education because with out education it is not possible to developed in any other department of life.
